PROSTAX SHUTTLE STACKER

pacproinc
Pacproinc, LLC

Maximize the performance of your packaging process with ProStax® stackers and loaders, the cutting-edge solution for precise counting, stacking, and loading of food products.

The ProStax Shuttle Stacker is the most flexible model in the ProStax line, handling long and short portions without changeover. It excels in paperless stacking, offering versatile options for vertical or shingle pattern stacking. With an innovative bypass mode, it functions without moving line components or adding auxiliary conveyors, adapting to any production environment.

FEATURES

- **Universal Application:** Ideal for handling both long and short portions, without the need for changeover.
- **Bypass Mode:** Enables products to pass through without moving line components or adding conveyors.
- **Mobile and Modular:** Designed with pads or casters for easy movement and a compact, space-saving structure, allowing quick repositioning within existing setups.
- **Paperless Stacking:** Capable of stacking with or without paper.
- **Allen-Bradley® PLC:** Offers advanced control and reliability for precise operation, essential for seamless integration with existing systems.
- **Ultra-Hygienic Design:** Ensures compliance with stringent food safety standards, reducing the risk of contamination.

Elevate your production with the ProStax - where precision meets versatility.
